SUMMARY

Computer Science undergraduate with strong skills in Java, SQL, Spring Boot, and full-stack development. Experienced in building responsive web applications and REST APIs with good problem-solving and debugging abilities. Strong understanding of Object-Oriented Programming, database concepts, and API development. Quick learner and self-motivated team player passionate about software development and scalable applications.

EDUCATION

Bachelor of Technology in Computer Science Engineering (AI & ML) Mohan Babu University CGPA: 9.3	2022 – 2026 Tirupathi
Board of Intermediate Education - Mathematics, Physics, Chemistry Sri Chaitanya Junior College Percentage: 96%	2020 – 2022 Tirupathi
Board of Secondary Education, Andhra Pradesh Allwyn Mount Carmel English Medium High School Percentage: 98.5%	2019 – 2020 Nandalur

SKILLS

- **Programming Languages:** Java, Python, SQL
- **Backend Technologies:** Spring Boot, REST APIs, API Testing
- **Frontend Technologies:** HTML, CSS
- **Databases:** MySQL
- **Tools & Platforms:** Git, GitHub, Postman, VS Code, Eclipse
- **Core Skills:** Object-Oriented Programming (OOP), Problem Solving, Debugging, Team Collaboration

PROJECTS

Student Task Manager 📄

Full-Stack Web Application using Spring Boot & MySQL

- Developed a full-stack task management web application with responsive modern UI and REST API integration.
- Implemented task creation, deletion, and completion tracking using Spring Boot backend and MySQL database.
- Integrated frontend and backend using Fetch API for real-time task updates and dynamic rendering. Designed interactive dashboard interface with responsive task cards and status management functionality.

TravelEase – Travel Booking System 📄

Java-Based Console Application

- Developed a modular console-based travel booking system using Java and Object-Oriented Programming principles.
- Implemented booking management, user authentication, and wallet transaction modules using Java Collections Framework.
- Improved application reliability through exception handling, input validation, and optimized program flow.

Hepatitis Detection System 📄

Application for Disease Stage Identification

- Designed and developed a predictive system for Hepatitis C stage classification using structured data processing and feature engineering
- Performed and improved data preprocessing and imbalance handling techniques to enhance model reliability and consistency
- Achieved and validated 95% accuracy in stage classification and integrated real-time prediction into the application

CERTIFICATES

- Java Programming Certification 📄
- ServiceNow Certified System Administrator (CSA) 📄
